

THE FAMILY
PARTNERSHIP

IMPACT REPORT

Thanks for supporting whole-family healing

In 2023, your generous support helped clear the path to success for children and families from 1,178 households.

- **46%** were infants to 18 years old
- **88%** were living in low-income households
- **86%** were Black, Indigenous, and people of color
- **60%** were girls and women
- **3%** were transgender and gender non-conforming

IMPACT STORY

All three of Taya and Courtney's children attended The Family Partnership's therapeutic preschool in North Minneapolis—including their youngest, five-year-old Zayvior.

Our developmental therapists worked with Zayvior onsite at the preschool to build speech, behavior, and fine motor skills. By the time Zayvior graduated from our preschool program, he tested kindergarten-ready, as did his entire graduating class!

Zayvior and his classmates' achievements are especially significant, because they live in a community where just 50% of children test kindergarten-ready. Research shows that kindergarten readiness leads to higher rates of academic success, graduation, workforce participation and earning potential across a lifetime. Studies also show these benefits continue into the next generation as children grow up and become parents themselves.
